## *Upcycling, co-products and creating efficiency is ours.*

- Westway Feed Products utilizes co-products as the foundation of our supplements. Examples of co-products are molasses, condensed molasses solubles (CMS), glycerin, whey, corn steep, condensed corn distillers solubles, soy solubles and more.
- Co-products are “waste” products from other manufacturing processes that might otherwise be disposed of, sent to landfills, etc.
- Westway utilizes co-products by enhancing their value through manufacturing and product alteration (i.e. stabilizing and nutrient concentration) to make nutritious animal feed.
- Cattle are upcyclers. They transform lower quality nutrients (carbohydrates and protein) in forages into higher quality, nutritious, human consumable protein.
- Genetics & nutrition – by matching your cow to your environment and utilizing our products, you can increase breed up %, increase herd performance, and support herd health.
- We all have a sustainability story in our operation. What is YOURS? Genetics, conservation, stewardship?

Let's visit about how you can work with Westway Feed Products to be a part of sustainable agriculture!
